

A taper pad attenuator connected to a load impedance of 50Ω is required to reduce the level of an audio signal by 18dB from an impedance source of 75Ω . Calculate the values of the three resistors required.

- ☐ a. $R_3 = 157\Omega$, $R_1 = 6.2\Omega$, $R_2 = 3.6\Omega$
- ☐ b. $R_3 = 15.7\Omega$, $R_1 = 62\Omega$, $R_2 = 36\Omega$
- ☐ c. $R_3 = 10\Omega$, $R_1 = 50\Omega$, $R_2 = 36\Omega$

The pressure gauge just mentioned is a good example of a deflection type of instrument, • deadweight gauge shown in Figure 2.3, which is a null-type instrument. Here, weights are put on top of the piston until the downward force balances the fluid pressure. Weights are added until the piston reaches a datum level, known as the null point. Pressure measurement is made in terms of the value of the weights needed to reach this null position
